Hiring Manager
Honeywell
400 Maple Grove Road
Kanata, ON K2V 1B8

Dear Honeywell Hiring Manager,

I am writing to express my interest in the Embedded Engineer position at Honeywell. With a strong background in computer engineering, a proven track record in both software and firmware roles, and a commitment to continuous learning and improvement, I am confident in my ability to contribute effectively to your team.

In my current position as a Firmware developer on the UBC Solar Design team, I am writing firmware to build a solar-powered car to compete at the Formula Sun Grand Prix. Over the past two months, I have been working on firmware for the driver dashboard, where I have implemented a Real-Time Operating System (RTOS) on STM32 to schedule tasks and prioritize low-latency updates. Currently, I am working on developing firmware for the LCD to have two-page functionality using Dual Buffering to minimize display latency and optimize memory usage. Overall, this experience has taught me to work in a collaborative team environment using version control systems such as Git while adhering to established coding standards for documentation and testing, skills I am eager to contribute as a Embedded Engineer at Honeywell.

Currently, I am pursuing a Bachelor of Applied Science in Computer Engineering at the University of British Columbia. My technical skill set is diverse and robust, including proficiency in multiple programming languages such as C, C++, Python, Java, and JavaScript. I have experience in various development tools and frameworks, including full-stack development environments like React, version control systems like Git, and Linux-based systems. My academic and practical experience has equipped me with a strong foundation, enabling me to effectively tackle complex technical challenges.

I am excited about the opportunity to bring my technical expertise and collaborative spirit to Honeywell. I am available for a 16-month term starting Summer 2026 and welcome the opportunity to discuss how my skills and experiences align with your needs. Please feel free to contact me via email at gregorybian100@gmail.com or by phone at 604-652-7598.

Thank you for your time and consideration. I look forward to the possibility of contributing to your team.

Sincerely,

Gregory Bian
